PROFESSIONAL SUMMARY

Staff software engineer with deep experience building cloud-native services, event-driven data processing platforms, and distributed systems in Go and Java on AWS and Kubernetes. Proven track record of leading complex multi-team projects from technical design through production, influencing architecture direction, and owning operational reliability end-to-end. Known for simplifying complex systems, driving clarity across service boundaries, and turning production incidents into durable improvements. Fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily to produce safe, testable, maintainable code while owning design, quality, and business outcomes.

CORE STRENGTHS

- **Event-driven architecture and data processing:** Go, Java, Spring Boot, REST, gRPC, JSON/HTTP APIs, microservices, CloudEvents, SQS/SNS pipelines, high-throughput async processing
- **Distributed systems:** reliability, scalability, fault tolerance, multi-region HA, consistency, rate-limit governance, sovereign/GovCloud environments
- **Cloud-native services:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD
- **Operational excellence:** incident ownership, DLQ recovery, monitoring, alerting, postmortems, deployment validation, on-call operations
- **Technical leadership:** architecture design, cross-team project delivery, threat modeling, mentoring early-in-career engineers, roadmap influence
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, IaC, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Owned design and delivery of cloud-native services across **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service**, leading multi-team technical initiatives from design through production operations.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full ownership from detection to resolution including postmortem and durable fixes.
- Led design and delivery of a **real-time event delivery** capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers, enabling high-throughput security event processing to customer systems.
- Drove cross-service design for **Splunk** and CloudEvents event formats across alerts, security events, integrations, and notifications services, influencing architecture across four teams and standardizing event-driven data delivery.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes, validating **HA behavior across two regions**.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.

- Mapped AuthSvc TLS secret synchronization and API key refresh behavior across deployment tooling, Secrets Manager, Kubernetes, and Kong, reducing ambiguity and improving operational reliability for security-sensitive services.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced platform capabilities across API gateway, authorization, integrations, and event-delivery domains using **Go, AWS, Terraform**, and event-driven architecture; grew into full production ownership for backend platform services.
- Built auth-tools, an internal **authorization library** adopted across multiple platform services, simplifying OAuth/policy enforcement integration.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.
- Led **ISMAP security certification** for the APIX platform; mentored early-in-career engineers and initiated "Tip Talk Tue" knowledge-sharing forum.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** and **Java/Spring Boot REST APIs** for cloud-native data ingestion and threat analytics platforms.
- Designed and implemented a **type-assisted search feature** for an Active Threat Analytics dashboard, reducing friction for security analysts.
- Optimized query performance for large-scale IP address lookups; contributed architectural improvements for caching, load balancing, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations in Java across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, OOP design, service integrations, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
