PROFESSIONAL SUMMARY

Software Engineering Technical Leader with 18+ years of experience building cloud-native microservices platforms, telemetry delivery systems, and SaaS infrastructure on AWS and Kubernetes. Proven track record of owning critical production systems end-to-end — from metrics instrumentation and event delivery to incident recovery and multi-region reliability. Experienced collaborating with cross-functional teams to implement monitoring, reduce operational burden, and set platform direction for large-scale distributed systems. Fluent in AI-assisted engineering workflows using Claude Code, GitHub Copilot, and Codex across the full SDLC.

CORE STRENGTHS

- **Observability and telemetry:** metrics instrumentation (Authorization Service, Integrations Service), OpenTSDB timeseries database, Splunk event delivery, CloudEvents, DLQ recovery, deployment validation
- **Production reliability:** production ownership, incident recovery, multi-region HA rollouts, sovereign/GovCloud environments, rate-limit governance, SaaS customer support
- **Backend/platform engineering:** Go (Golang), Java, Spring Boot, REST, gRPC, JSON/HTTP APIs, microservices, event-driven systems
- **Cloud and infrastructure:** AWS (EC2, S3, ECS, EKS, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD (Jenkins), Linux
- **Engineering leadership:** technical design, production ownership, cross-team collaboration, mentoring, helping external teams implement monitoring, pragmatic architecture
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, code review, and design exploration

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Drove cross-service design for **Splunk** and **CloudEvents** webhook/event formats across alerts, security events, integrations, and notifications services — enabling consistent event delivery formats across platform services.
- Led design and delivery of push security events capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers, enabling real-time telemetry delivery to customer systems.
- Prevented security-event message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full incident ownership from detection to resolution.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes, validating **HA behavior across two regions**.
- Analyzed multi-region failover design for an **API anomaly detection pipeline** spanning Kinesis Firehose, S3/Iceberg, EMR on EKS, SQS/SNS, DynamoDB, and downstream telemetry delivery.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, unblocking the customer and driving durable fixes.
- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Implemented **metrics instrumentation** for Authorization Service and Integrations Service; worked with **OpenTSDB** as the timeseries database for platform service metrics.
- Partnered across product, engineering, and operations teams to turn ambiguous platform problems into implementation plans, rollout paths, and production support decisions.
- Built auth-tools, an internal authorization library adopted across multiple platform services to simplify OAuth/policy enforcement integration for downstream teams.
- Integrated **AI tooling (Claude Code, Copilot, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide **GitHub Copilot** adoption ahead of broader Cisco initiatives.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform.
- Designed and implemented a type-assisted search feature for an **Active Threat Analytics** dashboard, improving query speed for security analysts.
- Optimized query performance for large-scale IP address lookups; contributed architectural improvements for caching, load balancing, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integration features across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, service integrations, and maintainable engineering practices.

| CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

| EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
