PROFESSIONAL SUMMARY

Backend and API engineer with 18+ years of experience designing and operating large-scale distributed systems and ergonomic APIs across financial infrastructure, security platforms, and enterprise integration products. Deep production ownership track record — from API design and service architecture through critical incident response and cross-functional delivery. Experienced building reliable event-driven systems handling high-volume, time-sensitive workloads across multi-region and sovereign environments. Over the last two years I have gotten genuinely effective at directing AI tools (GitHub Copilot, Claude Code, Codex) to produce safe, testable, readable code across the full SDLC while owning the design, quality bar, and business outcome.

CORE STRENGTHS

- **API design & backend systems:** Go, Java, Spring Boot, gRPC, REST/JSON APIs, webhooks, CloudEvents, event-driven microservices, ergonomic API design, SQL
- **Large-scale distributed systems:** multi-region deployments, high-volume message processing, DLQ recovery, rate limiting, retry/backoff patterns, HA validation
- **Cloud services:** AWS (Lambda, ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD
- **Financial & enterprise integrations:** OAuth 2.0, OIDC, API key management, third-party integrations (Intune, Jamf, Chrome Enterprise), access control enforcement
- **Production ownership:** incident response, customer escalation resolution, cross-service debugging, deployment validation, on-call
- **Engineering leadership:** technical design, mentoring early-in-career engineers, cross-team coordination, internal tooling and standards
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, and code review

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Designed and built APIs and backend services for Cisco Secure Access, owning the **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service** — spanning API design, implementation, production support, and cross-team coordination.
- Prevented message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 organizations**, and redriving all messages within **5-10 minutes** — demonstrating multi-level stack debugging across services.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key authentication and rate-limit behavior, unblocking the customer with a targeted mitigation and driving durable fixes around retry/backoff, token reuse, and service ownership.
- Architected real-time **webhook delivery** and enterprise integrations for Cisco Secure Access, enabling alert and security-event delivery to Chrome Enterprise Browser, Microsoft Intune, and Jamf Pro — designing for reliability across high-volume, time-sensitive workloads.
- Led cross-service API design for customer-selected **Splunk** and **CloudEvents** delivery formats across alerts, security events, integrations, and notifications services — coordinating stakeholders across four teams to a shared contract.
- Led design and delivery of push security events capability using the **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers.

- Diagnosed and fixed a Jamf / Intune integration issue live during a prospective customer evaluation, **contributing directly to the customer's purchase decision.**

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Built **auth-tools**, an internal authorization library adopted across multiple platform services, improving API consistency and reducing repetitive OAuth/policy enforcement integration work.
- Mentored early-in-career engineers through code review, design feedback, and hands-on pairing — consistent recognition from peers as a force multiplier.
- Pioneered team-wide **GitHub Copilot** adoption ahead of broader Cisco AI initiatives; integrated AI tooling (Claude Code, Codex) into daily workflows across implementation, IaC, testing, and code review.
- Led **ISMAP security certification** for the APIX platform, coordinating cross-functional compliance requirements end-to-end and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform; built API-driven authentication and authorization flows using OIDC, OAuth 2.0, and gRPC-Web.
- Contributed to automatic generation of protocol buffer specs and gRPC APIs from SQL schemas, improving API consistency and reducing repetitive implementation work across services.
- Designed a type-assisted search feature for an Active Threat Analytics dashboard, reducing friction for security analysts writing threat-hunting queries.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, workflow applications, and integration features across financial services, healthcare, insurance, and public-sector domains.
- Built a foundation in Java, REST APIs, service integrations, and maintainable engineering practices before moving into cloud-native platform work.

| CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

| EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
