PROFESSIONAL SUMMARY

Senior software engineer with deep experience building highly available distributed systems, real-time event delivery platforms, and cloud-native microservices. Proven track record of end-to-end production ownership from architecture through incident leadership, with a particular focus on keeping mission-critical systems reliable under strict SLAs. Background spans Java and Go, with production work across API gateways, security event pipelines, and telemetry delivery at scale. Fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily across the full SDLC, directing them to produce safe, testable, readable code while owning design, quality, and business outcomes.

CORE STRENGTHS

- **Backend and platform engineering:** Java, Spring Boot, Go, REST, gRPC, JSON/HTTP APIs, microservices, event-driven systems, real-time pipelines, high-throughput async processing
- **Production reliability and incident leadership:** production ownership, DLQ recovery, multi-region HA rollouts, incident detection and resolution, deployment validation, SLA management
- **Cloud and infrastructure:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD
- **Observability and telemetry:** metrics instrumentation (Authorization Service, Integrations Service), Splunk event delivery, CloudEvents, OpenTSDB (2017-2019)
- **Technical leadership:** design reviews, cross-team initiatives, multi-quarter project ownership, mentoring early-in-career engineers, pragmatic architecture
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Owned design and delivery of critical components across **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service**, taking end-to-end responsibility from architecture through production operations under strict SLAs.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full incident ownership from detection to resolution.
- Led design and delivery of a **real-time security event delivery** capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers, enabling customers to receive actionable security events in real time.
- Drove cross-service design for **Splunk** and CloudEvents event formats across alerts, security events, integrations, and notifications services, standardizing telemetry delivery across the platform.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.
- Drove integrations-svc production readiness across **sovereign and multi-region environments**, decomposing a high-risk Terraform rollout into staged changes and validating **HA behavior across two regions**.

- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced platform capabilities across API gateway, authorization, integrations, and event-delivery domains, growing into full production ownership for backend platform services.
- Implemented **metrics instrumentation** for Authorization Service and Integrations Service, improving observability of core platform services.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.
- Mentored early-in-career engineers through code review and design feedback; led **ISMAP security certification** for the APIX platform, coordinating cross-functional compliance requirements to deadline.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** and **Java/Spring Boot REST APIs** for cloud-native data ingestion and threat analytics platforms.
- Designed and implemented a **type-assisted search feature** for an Active Threat Analytics dashboard, reducing friction for security analysts writing threat-hunting queries.
- Optimized query performance for large-scale IP address lookups; contributed architectural improvements for caching, load balancing, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations in Java across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, OOP design, service integrations, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
