PROFESSIONAL SUMMARY

Senior software engineer with deep experience writing high-quality, well-tested, scalable code and collaborating on critical system architecture decisions across Go, Java, TypeScript, and AWS. Proven track record of building and operating cloud-native services end-to-end, using infrastructure-as-code to deploy reliably at scale, and mentoring engineers to grow team capabilities. Bring strong OOP and distributed systems fundamentals developed across 18 years of production engineering, with particular depth in API design, event-driven systems, and secure backend services. Fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily to produce safe, testable, maintainable code while owning design, quality, and business outcomes.

CORE STRENGTHS

- **Backend engineering:** Go, Java, Spring Boot, TypeScript, JavaScript, REST, gRPC, JSON/HTTP APIs, microservices, event-driven systems, OOP design
- **Cloud-native services and IaC:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager, Lambda), Kubernetes, Docker, Terraform, CI/CD
- **Data and storage:** DynamoDB (nonrelational), SQL, relational databases, event-driven data pipelines (SQS/SNS, CloudEvents)
- **Engineering quality:** architecture design, code review, testing, deployment validation, production ownership, incident response
- **Technical leadership:** cross-team collaboration, mentoring early-in-career engineers, stakeholder communication, roadmap contribution
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, IaC, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Owned and delivered **scalable, well-tested cloud-native services** including API Gateway, Authorization Service, and Third-Party Integrations Service, taking end-to-end responsibility from architecture through production operations.
- Led design and delivery of a real-time event delivery capability using the **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers, writing clean, production-quality Go throughout.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full ownership from detection to resolution.
- Drove integrations-svc production readiness across **multi-region environments** using **Terraform IaC**, validating **HA behavior across two regions**.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.
- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Wrote high-quality, well-tested code in **Go and TypeScript** across API gateway, authorization, integrations, and event-delivery domains, growing into full production ownership.
- Built auth-tools, an internal **authorization library** adopted across multiple platform services, simplifying OAuth/policy enforcement integration for downstream teams.
- Mentored early-in-career engineers through code review, design feedback, and hands-on guidance; pioneered team-wide **GitHub Copilot** adoption ahead of broader Cisco AI initiatives.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** and **Java/Spring Boot REST APIs** for cloud-native data ingestion and threat analytics platforms.
- Built OIDC/OAuth 2.0 authentication and authorization flows; contributed automatic generation of protocol buffer specs and gRPC APIs from SQL schemas.
- Designed and implemented a **type-assisted search feature** for an Active Threat Analytics dashboard, improving query speed for security analysts.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations in Java across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, OOP design, relational and nonrelational databases, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
