PROFESSIONAL SUMMARY

Software Engineering Technical Leader with deep experience building cloud-native backend systems, high-volume event streaming pipelines, APIs, and third-party integrations at Cisco scale. Strong in Go and Java, with hands-on experience designing and operating streaming event flows, SQS/SNS-based notification systems, timeseries data instrumentation (OpenTSDB), and multi-region data pipeline analysis. Effective at deploying production-ready systems with rigorous rollout/rollback planning, monitoring, and fault-tolerance validation. Brings deep AI-assisted engineering fluency — daily use of Claude Code, Codex, and GitHub Copilot — directly matching the JD's requirement for AI-based code tool experience.

ROLE ALIGNMENT

- **Go and Java backend engineering:** 6+ years Go, extensive Java; cloud-native APIs, gRPC, microservices, event-driven systems
- **Streaming systems and high-volume event pipelines:** SQS/SNS event flows, DLQ recovery (300k+ messages), real-time security-event and notification delivery; CloudEvents standard implementation
- **Timeseries and data infrastructure:** OpenTSDB timeseries instrumentation for platform services; S3/Iceberg data lake pipeline analysis; Kinesis Firehose, EMR on EKS, DynamoDB
- **APIs and third-party integrations:** webhook delivery, CloudEvents, Splunk HEC, enterprise integrations (Chrome, Intune, Jamf Pro); API gateway design and enforcement
- **Production deployment and reliability:** multi-region HA rollout, staged Terraform deployments, rollout/rollback planning, deployment validation, monitoring and alerting
- **AI-assisted SDLC:** daily Claude Code, GitHub Copilot, Codex across implementation, testing, IaC, debugging, and design; pioneered team-wide AI tooling adoption; working familiarity with agentic tool patterns (LLM + memory + tool use)

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Analyzed and designed multi-region failover architecture for an API anomaly detection pipeline spanning **Kinesis Firehose, S3/Iceberg, EMR on EKS, SQS/SNS, DynamoDB**, and downstream webhook delivery — a high-volume streaming data pipeline serving real-time detection and alerting use cases.
- Led design and delivery of a real-time **push security events** capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers — a streaming notification system delivering high-volume security events to customer systems.
- Drove cross-service design for customer-selected **Splunk** and **CloudEvents** data formats across alerts, security events, integrations, and notifications services, defining event schemas and delivery pipelines across four platform services.
- Prevented data loss during a production streaming incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and executing full message redrive within **5-10 minutes**.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** with staged Terraform rollout, HA validation, monitoring, and rollback planning across ECR, Secrets Manager, DynamoDB streams, and SNS.
- Resolved a customer-scale API failure by tracing **250+ appliance registration requests** through API key authentication and rate-limit enforcement, driving durable fixes around retry/backoff, token reuse, and service ownership.

- Architected real-time webhook delivery and **third-party integrations** for Cisco Secure Access, enabling customer-facing alert and security-event delivery with Chrome Enterprise Browser, Microsoft Intune, and Jamf Pro.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Implemented **metrics instrumentation** for Authorization Service and Integrations Service using **OpenTSDB** as the timeseries database — providing platform-level visibility into service health, throughput, and performance.
- Partnered across product, engineering, operations, and support teams to turn ambiguous platform problems into implementation plans, rollout paths, and production support decisions.
- Integrated AI tooling (Claude Code, Copilot, Codex) into daily engineering workflow across the full SDLC; pioneered team-wide GitHub Copilot adoption ahead of broader Cisco initiatives.
- Initiated “Tip Talk Tue,” a recurring knowledge-sharing forum on engineering productivity and best practices; mentored early-in-career engineers through code review and design feedback.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform; contributed to automatic generation of protocol buffer specs from SQL schemas.
- Built API-driven authentication and authorization flows using OIDC, OAuth 2.0, and gRPC-Web interactions.
- Optimized query performance for large IP address ranges and contributed architectural improvements for caching, load balancing, and clustered deployments.
- Developed Spring Boot / Java REST APIs and Angular applications for threat awareness and security analytics products.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, internal tools, and integration features across financial services, healthcare, insurance, and public-sector domains.
- Built a foundation in Java, REST APIs, service integrations, automation, testing, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
