

# Kamal Joshi

## Technical Lead / Senior Backend & Platform Engineer | Go | AWS | Kubernetes | Security Platforms

Austin, TX | Open to remote-friendly roles within the U.S. | Open to relocation for the right opportunity  
+1-614-825-3047 | [kamal2311@gmail.com](mailto:kamal2311@gmail.com) | [linkedin.com/in/kamaljoshiworks](https://linkedin.com/in/kamaljoshiworks) | [github.com/kamal2311](https://github.com/kamal2311)

### PROFESSIONAL SUMMARY

Senior backend/platform engineer and technical leader with deep experience building security products, API gateways, cloud-native services, event-driven integrations, and distributed backend systems. Strong in Go, Java, AWS, Kubernetes/EKS, Terraform, APIs, authorization, telemetry/event delivery, and production ownership. Effective in environments where scale, performance, reliability, robustness, and security matter: simplifying complex systems, driving architecture across service boundaries, and turning customer escalations or production incidents into durable platform improvements.

### ROLE ALIGNMENT

- **Backend and platform engineering:** Go, Java, REST, gRPC, gRPC-Web, JSON/HTTP APIs, microservices, webhooks, event-driven systems
- **Scale and reliability:** SQS/SNS event flows, DLQ recovery, multi-region readiness, HA rollout, production incident response, deployment validation
- **Security architecture:** API gateways, authorization services, OAuth 2.0, OIDC, API keys, service credentials, rate limits, customer integrations, secure coding
- **Cloud and Kubernetes:** AWS Lambda, ECS, EKS, S3, SQS/SNS, DynamoDB, AWS Secrets Manager, Terraform modules, multi-account infrastructure, Docker
- **Technical leadership:** architecture, production ownership, cross-team coordination, customer escalations, pragmatic design, mentoring, agile delivery
- **Data and telemetry:** event routing, security-event delivery, API usage/anomaly pipeline analysis, schema/API generation, customer-selected output formats
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, code review, and design exploration; working familiarity with agentic tool patterns (LLM + memory + tool use)

### EXPERIENCE

#### Cisco

##### Software Engineering Technical Leader

November 2025 - May 2026 | Austin, TX

- Owned backend/platform systems including **API Gateway**, **Authorization Service**, and Third-Party Integrations Service, spanning design, implementation, production support, and cross-team coordination.
- Architected real-time **webhook delivery** and **enterprise integrations** for Cisco Secure Access, enabling customer-facing alert/security-event delivery with Chrome Enterprise Browser, Microsoft Intune, and Jamf Pro.
- **Diagnosed and fixed a Jamf / Intune integration issue live during a prospective customer evaluation**, helping restore confidence in the product experience and **contributing to the customer's purchase decision**.
- Prevented security-event message loss during a production webhook incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages successfully within **5-10 minutes**.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes across ECR, Secrets Manager, DynamoDB streams, SNS, service config, and audit logging, while validating HA behavior across at least two regions.
- Resolved a customer-scale onboarding failure in the token flow by tracing **250+ appliance registration requests** through API key authentication and APIGW rate-limit behavior, unblocking the customer with a targeted mitigation and driving durable fixes around retry/backoff, token reuse, and service ownership.

- Drove cross-service design for customer-selected **Splunk** and **CloudEvents** webhook formats across alerts, security events, integrations, and notifications services.
- Led design and delivery of push security events capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers — a long-awaited product feature enabling real-time security event delivery to customer systems.

### Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced Cisco Secure Access / APIX platform capabilities across API gateway, authorization, integrations, and event-delivery domains.
- Grew into production ownership for backend platform services, helping teams reason through API access, customer integrations, operational readiness, distributed failure modes, and cross-service dependencies.
- Partnered across product, engineering, operations, customer enablement, and support teams to turn ambiguous platform problems into implementation plans, rollout paths, and production support decisions.
- Applied Go, AWS, Terraform, event-driven patterns, and API gateway concepts to evolve security-platform services and supporting infrastructure.
- Built auth-tools, an internal authorization library adopted across multiple platform services to simplify OAuth/policy enforcement integration.
- Analyzed multi-region failover design for an API anomaly detection pipeline spanning Kinesis Firehose, S3/Iceberg, EMR on EKS, SQS/SNS, DynamoDB, and downstream webhook delivery.
- Integrated AI tooling (Claude Code, Copilot, Codex) into daily engineering workflow across the full SDLC — from design exploration and code generation to IaC authoring, test generation, debugging, and code review; pioneered team-wide GitHub Copilot adoption ahead of broader Cisco initiatives.
- Initiated “Tip Talk Tue,” a recurring team knowledge-sharing forum on engineering productivity and security practices.
- Led ISMAP security certification for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.

### Randstad Technologies US at Cisco

#### Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented Go-based gRPC and JSON/HTTP APIs for a cloud-native data ingestion platform during the 2020-2021 transition from Java/Spring systems toward Go-based platform services.
- Built API-driven authentication and authorization flows using OIDC, OAuth 2.0, and gRPC-Web interactions.
- Contributed to automatic generation of protocol buffer specs and gRPC APIs from SQL schemas, improving API consistency and reducing repetitive implementation work.
- Designed and implemented a type-assisted search feature for an Active Threat Analytics dashboard, helping security analysts write threat-hunting queries faster and with less friction.
- Developed Spring Boot / Java REST APIs and Angular-based applications for threat awareness and security analytics products, including customer internet-resource registration and authorization workflows.
- Optimized query performance for large IP address ranges and contributed architectural improvements for caching, load balancing, push notifications, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding practices, browser security headers, input sanitization, and server-side validation.

### Earlier Engineering Experience

**Cognizant, Oracle, Collabera** | December 2007 - February 2015

- Delivered backend services, internal tools, workflow applications, and integration features across financial services, enterprise content systems, healthcare, insurance, and public-sector domains.
- Turned ambiguous requirements into working product features through rapid prototyping, stakeholder feedback, and cross-team collaboration.
- Built a foundation in Java, REST APIs, service integrations, automation, testing, and maintainable engineering practices before moving into cloud-native security platform work.

## **CERTIFICATIONS**

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

## **EDUCATION**

Bachelor of Engineering, Information Technology  
Dharmsinh Desai University
