

Kamal Joshi

Product Engineer | Go | TypeScript | AWS | Full-Stack | Platform Engineering

Austin, TX | Open to remote | +1-614-825-3047 | kamal2311@gmail.com | linkedin.com/in/kamaljoshiworks | github.com/kamal2311

PROFESSIONAL SUMMARY

Product engineer and technical leader with deep experience owning features end-to-end: from identifying the problem, designing the solution, and building the backend through shipping to customers. Built the Third-Party Integrations Service from scratch at Cisco: researched integration requirements, designed an extensibility-first API surface, and shipped a platform that accommodated every new integration type without structural rewrites. Chrome Enterprise, Intune, Jamf Pro, Splunk, and CloudEvents all fit within the original design. Known for building reusable abstractions that eliminate whole categories of work and for driving ambiguous, cross-service problems through to clean outcomes without process scaffolding. Over the last two years, I have become genuinely effective at directing AI tools (Claude Code, GitHub Copilot, Codex) to produce safe, testable, readable code across the full SDLC while owning the design, quality bar, and outcome.

CORE STRENGTHS

- **Full-stack engineering:** Go, TypeScript, JavaScript, Angular, REST, gRPC, JSON/HTTP APIs, responsive web application development
- **Platform and abstractions:** reusable library design, declarative API architecture, extensibility-first system design, leverage through tooling
- **Cloud and infrastructure:** AWS (Lambda, ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Terraform, Kubernetes, Docker, CI/CD
- **Product ownership:** end-to-end feature delivery, customer problem research, product spec writing, API contract design, cross-team stakeholder coordination
- **Engineering leadership:** production ownership, incident recovery, customer escalations, technical design, cross-team collaboration
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, code review, and design exploration

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Designed and built the **Third-Party Integrations Service** from scratch: researched integration requirements across product, engineering, and customer teams; designed an extensibility-first API that accommodated Chrome Enterprise, Microsoft Intune, Jamf Pro, Splunk, and CloudEvents without structural rewrites; shipped a platform that became Cisco's primary integrations enabler for major enterprise partnerships.
- Led end-to-end design and delivery of push security events capability using the **CloudEvents** standard: wrote the spec, drove technical decisions, and delivered **alpha on schedule (Nov 2025)** with a team of three engineers, turning a long-awaited product need into a shipped, customer-facing capability.
- **Diagnosed and fixed a Jamf / Intune integration failure live during a prospective customer evaluation**, restoring confidence in the product experience and directly contributing to the customer's purchase decision.
- Prevented security-event message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 customer orgs**, and redriving all messages within **5-10 minutes**, with zero data loss.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and API gateway rate-limit behavior; unblocked the customer with a targeted mitigation and drove durable fixes around retry/backoff, token reuse, and service ownership.

- Drove cross-service design for customer-selectable **Splunk and CloudEvents webhook formats** across alerts, security events, integrations, and notifications services, producing a generalized output format system reused across multiple product surfaces.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes, validating HA behavior across at least two regions.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Built **auth-tools**, an internal authorization library adopted across multiple platform services: a reusable abstraction that eliminated repeated OAuth/policy enforcement integration work for every new service.
- Integrated AI tooling (Claude Code, Copilot, Codex) into daily engineering workflow across implementation, IaC, testing, debugging, and code review; pioneered team-wide GitHub Copilot adoption ahead of broader company initiatives.
- Initiated “Tip Talk Tue,” a recurring team knowledge-sharing forum on engineering productivity and security practices.
- Led ISMAP security certification for the APIX platform, coordinating cross-functional requirements and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented Go-based gRPC and JSON/HTTP APIs for a cloud-native data ingestion platform.
- Built API-driven authentication and authorization flows using OIDC and OAuth 2.0.
- Designed a type-assisted search feature for an Active Threat Analytics dashboard: researched analyst workflows, prototyped the interaction model, and shipped a UI that reduced friction for writing threat-hunting queries.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, internal tools, and integration features across financial services, healthcare, insurance, and public-sector domains.
- Turned ambiguous requirements into working product features through rapid prototyping and stakeholder feedback.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
