PROFESSIONAL SUMMARY

Senior software engineer with deep experience building highly available distributed systems, API platforms, and observability infrastructure in Go and AWS. Proven track record of end-to-end production ownership: from telemetry instrumentation and event delivery through incident leadership and systemic reliability improvements. Genuinely fluent in AI-assisted engineering — I use GitHub Copilot and Claude Code daily across the full SDLC, directing them to produce safe, testable, readable code while owning design, quality, and business outcomes. Strong product sense: I ask why as often as how, and I bring systems thinking to problems that span service boundaries.

CORE STRENGTHS

- **Backend and platform engineering:** Go, Java, REST, gRPC, JSON/HTTP APIs, microservices, event-driven systems, webhooks, CloudEvents
- **Observability and telemetry:** metrics instrumentation (Authorization Service, Integrations Service), OpenTSDB timeseries database, Splunk event delivery, DLQ recovery, deployment validation
- **Reliability and production ownership:** incident leadership, multi-region HA rollouts, sovereign/GovCloud environments, rate-limit governance, highly available systems
- **Cloud and infrastructure:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD
- **API design:** API gateways (Kong), OAuth 2.0, OIDC, API key management, REST, gRPC, third-party integrations
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, IaC, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)
- **Technical leadership:** architecture briefs, cross-team design reviews, mentoring early-in-career engineers, end-to-end project ownership, pragmatic architecture

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Owned highly available backend systems including **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service**, taking end-to-end responsibility from architecture through production.
- Implemented **metrics instrumentation** for Authorization Service and Integrations Service; worked with **OpenTSDB** as the timeseries database for platform service metrics, improving observability of core platform services.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full incident ownership from detection to resolution.
- Led design and delivery of a real-time **telemetry delivery** capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers.
- Drove cross-service design for **Splunk** and CloudEvents event formats across alerts, security events, integrations, and notifications services, reducing complexity and standardizing telemetry delivery across the platform.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes, validating **HA behavior across two regions**.

- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation,** contributing directly to the **customer's purchase decision.**

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Improved **platform observability** and production reliability across API gateway, authorization, integrations, and event-delivery domains.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.
- Built auth-tools, an internal authorization library adopted across multiple platform services, simplifying OAuth/policy enforcement integration for downstream teams.
- Mentored early-in-career engineers through code review and design feedback; initiated "Tip Talk Tue," a recurring team knowledge-sharing forum.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform.
- Built OIDC/OAuth 2.0 authentication and authorization flows integrated across frontend and backend layers.
- Optimized query performance for large-scale IP address lookups; contributed architectural improvements for caching, load balancing, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, service integrations, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
