PROFESSIONAL SUMMARY

Senior software engineer with deep Java and REST API experience, a foundation in Oracle-backed healthcare systems, and a track record of resolving complex production issues in client-facing environments. Built healthcare REST APIs on Oracle databases early in my career, then spent a decade advancing into cloud-native platform engineering — bringing the same discipline around production reliability, client impact, and maintainable code. Known for diagnosing and resolving production issues quickly and thoroughly, communicating clearly across engineering and business stakeholders, and mentoring engineers to raise team quality. Fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily to produce safe, testable, maintainable code across the full SDLC.

CORE STRENGTHS

- **Java and backend development:** Java, Spring Boot, REST APIs, OOP design, gRPC, JSON/HTTP APIs, microservices
- **Oracle and data:** Oracle, SQL development and query optimization, relational databases, DynamoDB, data pipeline analysis
- **Production support and reliability:** production issue resolution, incident ownership, client-facing troubleshooting, root-cause analysis, deployment validation
- **Healthcare domain:** REST API development for healthcare product (Intuit-integrated, Oracle backend), 3 years at Cognizant
- **Cloud and infrastructure:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Terraform, Kubernetes, Docker, CI/CD (Jenkins), Git, Linux
- **Technical leadership:** code review, mentoring early-in-career engineers, cross-team collaboration, knowledge sharing, documentation

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- **Resolved a customer-scale onboarding failure** by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, unblocking the customer and driving durable fixes around retry/backoff, token reuse, and service ownership.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — communicating status to stakeholders throughout.
- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.
- Drove integrations-svc production readiness across sovereign and multi-region environments by decomposing a high-risk Terraform rollout into staged changes, documenting architecture and validating HA behavior at each step.
- Led design and delivery of a real-time event delivery capability using CloudEvents, delivering **alpha on schedule (Nov 2025)** with a team of three engineers.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Grew into production ownership for backend platform services, resolving issues across API gateway, authorization, integrations, and event-delivery domains.

- Built auth-tools, an internal authorization library adopted across multiple platform services, with clear documentation and design specifications.
- Mentored early-in-career engineers through code review, design feedback, and hands-on guidance; initiated "Tip Talk Tue" knowledge-sharing forum.
- Integrated AI tooling (GitHub Copilot, Claude Code, Codex) into daily engineering workflow; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented Go-based gRPC and **Java/Spring Boot REST APIs** for cloud-native data ingestion and threat analytics platforms.
- Built OIDC/OAuth 2.0 authentication flows integrated across frontend and backend services.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, and server-side validation.

Earlier Engineering Experience

Oracle, Cognizant, Collabera, and others | January 2007 - February 2015

- Built **Java REST APIs** for a healthcare product at Cognizant (2007-2010) designed for use by Intuit, with **Oracle** as the backend database — direct healthcare domain and Oracle development experience.
- Worked as a Java developer at **Oracle** (2010-2013), deepening enterprise Java, SQL, and large-scale data systems experience.
- Delivered backend services and integrations across financial services, healthcare, insurance, and enterprise content domains.

| CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

| EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
