PROFESSIONAL SUMMARY

Senior cloud engineer with deep experience building cloud-native microservices, security platforms, and event-driven systems in Go on AWS and Kubernetes. Spent a decade building production security infrastructure at Cisco: API gateways, authorization services, real-time event delivery, and enterprise threat analytics, with end-to-end ownership from architecture through incident response. Genuinely fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily across the full SDLC, directing them to produce safe, testable, reliable code while owning design, quality, and business outcomes. Passionate about the cybersecurity mission and ready to work at the scale where it matters most.

CORE STRENGTHS

- **Cloud-native microservices:** Go, Java, REST, gRPC, JSON/HTTP APIs, event-driven systems, microservices architecture, scalable data processing
- **Security and threat detection:** Cisco Secure Access platform, OAuth 2.0, OIDC, OPA policy enforcement, API key management, OWASP secure coding, Active Threat Analytics
- **Production reliability:** incident ownership, DLQ recovery, multi-region HA rollouts, rate-limit governance, on-call operations, deployment validation
- **Cloud and infrastructure:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Kubernetes, Docker, Terraform, CI/CD
- **Observability:** metrics instrumentation (Authorization Service, Integrations Service), OpenTSDB, Splunk event delivery
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)
- **Technical leadership:** architecture design, cross-team collaboration, mentoring early-in-career engineers, delivering projects on schedule

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Owned cloud-native backend systems including **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service**, taking end-to-end responsibility from architecture through production operations.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full incident ownership from detection to resolution.
- Led design and delivery of a real-time security event delivery capability using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers, enabling organizations to receive security alerts in real time.
- Drove cross-service design for **Splunk** and CloudEvents event formats across alerts, security events, integrations, and notifications services, standardizing event delivery across the platform.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.
- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes, validating **HA behavior across two regions**.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced platform security capabilities across API gateway, authorization, integrations, and event-delivery domains using **Go, AWS, Terraform**, and event-driven architecture.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.
- Built auth-tools, an internal **authorization library** adopted across multiple platform services, simplifying OAuth/policy enforcement integration.
- Led **ISMAP security certification** for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform.
- Designed and implemented a **type-assisted search feature** for an Active Threat Analytics dashboard, helping security analysts write threat-hunting queries faster.
- Built OIDC/OAuth 2.0 authentication and authorization flows integrated across frontend and backend services.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, service integrations, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
