PROFESSIONAL SUMMARY

Software engineer with deep experience building safe, resilient, and highly-available cloud-native services on AWS, with a strong focus on security, compliance, and platform infrastructure that internal engineering teams depend on. Proven track record of designing and delivering complex distributed systems end-to-end: from technical specification and architecture through production operations and incident response. Experienced with infrastructure-as-code using Terraform across multi-account, multi-region environments and with programmatic enforcement of security and compliance controls. Fluent in AI-assisted engineering: I use GitHub Copilot and Claude Code daily to produce safe, testable, maintainable code while owning design, quality, and business outcomes.

CORE STRENGTHS

- **Cloud-native services and infrastructure:** AWS (ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager, Lambda), Kubernetes, Docker, Terraform, CI/CD, Linux, containers
- **Security and compliance:** OAuth 2.0, OIDC, OPA policy enforcement, API key management, multi-tenant authorization, OWASP secure coding, ISMAP security certification, sovereign/GovCloud environments
- **Distributed systems:** highly available services, fault tolerance, multi-region HA, rate-limit governance, event-driven architecture, RESTful API design
- **Backend engineering:** Go, Java, Spring Boot, TypeScript, JavaScript, REST, gRPC, JSON/HTTP APIs, microservices
- **IaC and DevOps:** Terraform modules, Terraform pipelines, multi-account infrastructure, deployment validation, operational excellence
- **AI-assisted SDLC:** daily use of GitHub Copilot, Claude Code, and Codex across implementation, IaC, testing, debugging, and code review; working familiarity with agentic tool patterns (LLM + memory + tool use)

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Owned and delivered **safe, resilient, highly-available cloud-native services** including API Gateway, Authorization Service, and Third-Party Integrations Service, taking end-to-end responsibility from architecture through production operations.
- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk **Terraform** rollout into staged changes across ECR, Secrets Manager, DynamoDB streams, SNS, and service config, validating **HA behavior across two regions**.
- **Prevented security-event message loss** during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages within **5-10 minutes** — full ownership from detection to resolution.
- Drove cross-service design for Splunk and CloudEvents event formats across alerts, security events, integrations, and notifications services, establishing **cloud-native engineering patterns** adopted across four teams.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.
- Mapped **AuthSvc TLS secret synchronization** and API key refresh behavior across deployment tooling, Secrets Manager, Kubernetes, and Kong, reducing security-sensitive operational ambiguity.

- **Diagnosed and fixed a critical integration issue live during a prospective customer evaluation**, contributing directly to the **customer's purchase decision**.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced platform capabilities across API gateway, authorization, integrations, and event-delivery domains using **Go, AWS, Terraform**, and event-driven architecture.
- Built auth-tools, an internal **authorization library** adopted across multiple platform services, simplifying **OAuth/policy enforcement** integration for downstream teams.
- Led **ISMAP security certification** for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.
- Integrated **AI tooling (GitHub Copilot, Claude Code, Codex)** into daily engineering workflow across the full SDLC; pioneered team-wide Copilot adoption ahead of broader Cisco AI initiatives.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** and **Java/Spring Boot REST APIs** for cloud-native data ingestion and threat analytics platforms.
- Built **OIDC/OAuth 2.0** authentication and authorization flows integrated across frontend and backend layers.
- Contributed architectural improvements for caching, load balancing, and clustered deployments; optimized query performance for large-scale IP address lookups.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | January 2007 - February 2015

- Delivered backend services and integrations in Java across financial services, healthcare, insurance, and enterprise domains.
- Built foundation in Java, REST APIs, service integrations, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
