

Kamal Joshi

Senior Backend & Platform Engineer | Go | Distributed Systems | SaaS Platforms | API Infrastructure | AWS

Austin, TX | Open to remote | +1-614-825-3047 | kamal2311@gmail.com | linkedin.com/in/kamaljoshiworks | github.com/kamal2311

PROFESSIONAL SUMMARY

Senior backend and platform engineer with deep experience building and operating scalable, multi-tenant SaaS platform services in Go and Java, with deep experience in distributed systems, API infrastructure, and production ownership. Proven record of planning and executing safe, staged rollouts of high-risk platform changes across cloud-native environments while keeping customer impact at zero. Strong cross-team collaborator who authors design documents, drives roadmap alignment across squads, and mentors engineers — working transparently and bringing stakeholders on board before making changes. Over the last two years I have become genuinely effective at directing AI tools (GitHub Copilot, Claude Code, Codex) to produce safe, testable, readable code across the full SDLC while owning the design, quality bar, and business outcome.

CORE STRENGTHS

- **Backend platform engineering:** Go, Java, Spring Boot, REST, gRPC, JSON/HTTP APIs, webhooks, microservices, event-driven systems
- **Distributed systems:** multi-region HA, multi-tenancy, data isolation, scalability, DLQ recovery, rate limiting, retry/backoff design
- **Cloud and infrastructure:** AWS (Lambda, ECS, EKS, S3, SQS/SNS, DynamoDB, Secrets Manager), Terraform, Kubernetes, Docker, CI/CD
- **API and security infrastructure:** Kong API Gateway, OAuth 2.0, OIDC, API key management, authorization services, OpenAPI
- **Platform operations:** production ownership, incident recovery, sovereign/GovCloud environments, observability instrumentation, deployment validation
- **Engineering leadership:** technical design docs, roadmap contribution, cross-team coordination, mentoring, pragmatic architecture
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, code review, and design exploration

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Owned three core backend platform services — **API Gateway, Authorization Service, and Third-Party Integrations Service** — across design, implementation, production support, and multi-team coordination.
- Prevented security-event message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages successfully within **5-10 minutes** — demonstrating the operational ownership the role requires.
- Drove integrations-svc to production readiness across new **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes across ECR, Secrets Manager, DynamoDB streams, SNS, service config, and audit logging, validating **HA behavior across at least two regions**.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key auth and APIGW rate-limit behavior, unblocking the customer with a targeted mitigation and driving durable fixes around retry/backoff, token reuse, and service ownership.
- Led design and delivery of real-time push security events using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers — coordinating design across alerts, integrations, and notifications services.

- Authored cross-service design for **Splunk** and CloudEvents webhook formats; reframed API onboarding as a control-plane problem and proposed a hybrid Kong Admin API + Terraform model to improve self-service speed while preserving auditability.
- Diagnosed and fixed a Jamf / Intune integration issue **live during a prospective customer evaluation**, restoring confidence and contributing to the customer's purchase decision.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced APIX platform capabilities across API gateway, authorization, integrations, and event-delivery domains; grew into full production ownership for backend platform services.
- Built **auth-tools**, an internal authorization library adopted across multiple platform services, simplifying OAuth/policy enforcement integration and reducing cross-service inconsistency.
- Pioneered team-wide **GitHub Copilot** adoption ahead of broader Cisco initiatives; integrated Claude Code, Copilot, and Codex into daily SDLC across code generation, IaC, test generation, debugging, and design exploration.
- Mentored early-in-career engineers through code review, design feedback, and hands-on guidance; initiated "Tip Talk Tue," a recurring team knowledge-sharing forum on engineering productivity and platform practices.
- Led **ISMAP security certification** for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform; built API-driven authentication and authorization flows using OIDC and OAuth 2.0.
- Contributed to automatic generation of protocol buffer specs and gRPC APIs from SQL schemas, improving API consistency and developer velocity.
- Designed a type-assisted search feature for an Active Threat Analytics dashboard, reducing friction for security analysts writing threat-hunting queries.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding practices, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, internal tools, workflow applications, and integration features across financial services, healthcare, insurance, and public-sector domains.
- Built a foundation in Java, REST APIs, service integrations, automation, testing, and maintainable engineering practices.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
