PROFESSIONAL SUMMARY

Technical leader and senior Go engineer with deep experience building security products, cloud-native platform services, real-time event pipelines, and distributed backend infrastructure. Deep in Go, AWS, Kubernetes, security-event delivery, and production ownership — with hands-on design work spanning API gateways, authorization services, real-time observability pipelines, and cross-team platform integration at Cisco scale. Effective in technically demanding environments where distributed systems, security enforcement, data pipelines, and operational reliability intersect. Applies AI-assisted engineering workflows (Claude Code, Copilot, Codex) across the full SDLC to accelerate delivery and maintain quality.

ROLE ALIGNMENT

- **Go systems programming:** 6+ years of Go across platform services, API gateways, gRPC/JSON/HTTP data ingestion, and backend service implementation
- **Runtime security and security event delivery:** real-time security-event routing via CloudEvents and Splunk formats; API gateway enforcement, authorization service design, secure coding (100+ OWASP warnings → zero)
- **Observability and data pipelines:** designed multi-region failover for an API anomaly detection pipeline (Kinesis Firehose, S3/Iceberg, EMR on EKS, SQS/SNS, DynamoDB, webhook delivery); metrics instrumentation for platform services using OpenTSDB
- **Large-scale event collection and aggregation:** DLQ recovery (300k+ messages, 15 orgs, 5-10 min), SQS/SNS event flows, real-time webhook delivery at customer scale
- **Linux and Kubernetes:** Kubernetes/EKS-based microservice deployments, container-native backend development and debugging across Linux-based environments
- **Technical leadership:** architecture reviews, cross-team integration design, production ownership, cross-team coordination, mentoring, documentation
- **AI-assisted SDLC:** daily use of Claude Code, GitHub Copilot, and Codex across implementation, IaC, testing, debugging, code review, and design exploration; working familiarity with agentic tool patterns

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Provided technical leadership for backend/platform systems including **API Gateway**, **Authorization Service**, and **Third-Party Integrations Service**, spanning architecture, Go implementation, production support, and cross-team coordination across Cisco Secure Access.
- Led design and delivery of **push security events** capability using the open **CloudEvents** standard, delivering alpha on schedule (Nov 2025) with a team of three engineers — enabling real-time security event delivery to customer systems.
- Drove cross-service design for customer-selected **Splunk** and **CloudEvents** formats across alerts, security events, integrations, and notifications services — defining security event models and delivery pipelines for enterprise integrations.
- Prevented security-event message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and redriving messages successfully within **5-10 minutes**.
- Analyzed multi-region failover design for an API anomaly detection pipeline spanning **Kinesis Firehose**, **S3/Iceberg**, **EMR on EKS**, **SQS/SNS**, **DynamoDB**, and downstream webhook delivery.

- Drove integrations-svc production readiness across **sovereign and multi-region environments** by decomposing a high-risk Terraform rollout into staged changes and validating HA behavior across at least two regions.
- Resolved a customer-scale onboarding failure by tracing **250+ appliance registration requests** through API key authentication and APIGW rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Advanced Cisco Secure Access / APIX platform capabilities across API gateway, authorization, integrations, and event-delivery domains, owning backend platform services end-to-end.
- Analyzed multi-region failover design for an **API anomaly detection pipeline** spanning Kinesis Firehose, S3/Iceberg, EMR on EKS, SQS/SNS, DynamoDB, and downstream webhook delivery.
- Implemented **metrics instrumentation** for Authorization Service and Integrations Service; worked with **OpenTSDB** as the timeseries database for platform service observability.
- Partnered across product, engineering, operations, and support teams to turn ambiguous platform problems into implementation plans, rollout paths, and production support decisions.
- Applied **Go**, AWS, Terraform, event-driven patterns, and API gateway concepts to evolve security-platform services and supporting infrastructure.
- Integrated AI tooling (Claude Code, Copilot, Codex) into daily engineering workflow; pioneered team-wide GitHub Copilot adoption ahead of broader Cisco initiatives.
- Filed open-source issues acknowledged and fixed by maintainers: identified a base64 URL decoding bug in a widely-used **Go JWKS/JWT library** (MicahParks/compatibility-keyfunc) and surfaced a platform-specific Redis key encoding inconsistency in Spring Session.
- Led ISMAP security certification for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented **Go-based gRPC and JSON/HTTP APIs** for a cloud-native data ingestion platform, contributing to the transition from Java/Spring systems toward Go-based platform services.
- Built API-driven authentication and authorization flows using **OIDC, OAuth 2.0**, and gRPC-Web interactions.
- Designed and implemented a type-assisted search feature for an **Active Threat Analytics** dashboard, helping security analysts write threat-hunting queries faster with less friction.
- Optimized query performance for large IP address ranges and contributed architectural improvements for caching, load balancing, and clustered deployments.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding practices, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, internal tools, workflow applications, and integration features across financial services, enterprise content systems, healthcare, insurance, and public-sector domains.
- Built a foundation in Java, REST APIs, service integrations, automation, testing, and maintainable engineering practices before moving into cloud-native security platform work.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
