

Kamal Joshi

Technical Lead — Backend APIs & Platform Engineering | AWS | Microservices | AI/LLM Integration | Distributed Systems

Austin, TX | Open to remote-friendly and hybrid roles

+1-614-825-3047 | kamal2311@gmail.com | linkedin.com/in/kamaljoshiworks | github.com/kamal2311

PROFESSIONAL SUMMARY

Technical lead and senior backend engineer with deep experience architecting scalable APIs, microservices, and partner integrations — including end-to-end ownership from design through production incident recovery. Proven record of driving engineering excellence across teams: establishing coding standards, observability practices, CI/CD pipelines, and mentoring engineers at all levels. Actively integrates AI and LLM tooling into the engineering workflow and product delivery, with hands-on experience directing Claude Code, GitHub Copilot, and Codex to accelerate implementation, testing, and design exploration across the full SDLC.

CORE STRENGTHS

- **Backend APIs & microservices:** Go, Java, Spring Boot, REST, gRPC, JSON/HTTP APIs, event-driven architecture, distributed systems, SQL
- **Cloud & infrastructure:** AWS Lambda, ECS, EKS, S3, SQS/SNS, DynamoDB, AWS Secrets Manager, Kubernetes, Docker
- **CI/CD & observability:** Jenkins, Terraform pipelines, metrics instrumentation, alerting, DLQ monitoring, deployment validation, multi-region readiness
- **Partner integrations:** third-party platform integrations (Chrome Enterprise, Microsoft Intune, Jamf Pro, Splunk, CloudEvents), API gateway, OAuth 2.0, OIDC
- **AI/LLM integration:** Claude Code, GitHub Copilot, Codex — daily use across implementation, IaC, testing, debugging, and design; agentic tool patterns (LLM + memory + tool use); pioneered team-wide AI adoption
- **Frontend collaboration:** Angular, TypeScript, JavaScript, API-driven UI workflows
- **Engineering leadership:** technical design, production ownership, mentoring, coding standards, cross-team coordination, pragmatic architecture, incident recovery

EXPERIENCE

Cisco

Software Engineering Technical Leader

November 2025 - Present | Austin, TX

- Led design, development, and production ownership of **API Gateway, Authorization Service, and Third-Party Integrations Service** — backend microservices powering enterprise partner integrations for a security platform serving millions of end users.
- Architected and shipped enterprise integrations with **Chrome Enterprise Browser, Microsoft Intune, and Jamf Pro**, enabling real-time security-event delivery across a deep network of external partners.
- **Diagnosed and fixed a Jamf / Intune integration issue live during a prospective customer evaluation**, restoring confidence in the product experience and **contributing to the customer's purchase decision**.
- Prevented security-event message loss during a production incident by identifying a **300k+ message DLQ backlog**, quantifying impact across **15 orgs**, and recovering within **5-10 minutes** — then drove systemic improvements in retention-risk alerting and observability.
- Drove multi-region production readiness by decomposing a high-risk **Terraform** rollout into staged changes across ECR, Secrets Manager, DynamoDB streams, SNS, service config, and audit logging — validating HA behavior across multiple regions.
- Led design and delivery of real-time security event push using the open **CloudEvents** standard, delivering **alpha on schedule (Nov 2025)** with a team of three engineers.

- Resolved a customer onboarding failure by tracing **250+ appliance registration requests** through API key authentication and APIGW rate-limit behavior, driving durable fixes around retry/backoff, token reuse, and service ownership.

Senior Software Engineer

January 2021 - November 2025 | Austin, TX

- Mentored early-in-career engineers through code review, design feedback, and hands-on guidance; initiated **“Tip Talk Tue”**, a recurring team knowledge-sharing forum on engineering productivity and best practices.
- Integrated AI tooling (Claude Code, Copilot, Codex) into daily engineering workflow across the full SDLC; **pioneered team-wide GitHub Copilot adoption** ahead of broader Cisco initiatives.
- Built **auth-tools**, an internal authorization library adopted across multiple platform services — a reusable, modular component that simplified OAuth/policy enforcement integration team-wide.
- Led ISMAP security certification for the APIX platform, coordinating cross-functional compliance requirements and meeting all deadlines.

Randstad Technologies US at Cisco

Senior Software Developer

March 2015 - January 2021 | Dublin, OH

- Designed and implemented Go-based **gRPC and REST APIs** for a cloud-native data ingestion platform.
- Built API-driven authentication and authorization flows using **OIDC and OAuth 2.0**.
- Designed a type-assisted search feature for an Active Threat Analytics dashboard, improving how security analysts discover and query threat data.
- Reduced **100+ OWASP-reported security warnings to zero** through secure coding, browser security headers, input sanitization, and server-side validation.

Earlier Engineering Experience

Cognizant, Oracle, Collabera | December 2007 - February 2015

- Delivered backend services, REST APIs, and integration features across healthcare, financial services, insurance, and public-sector domains.
- Built a foundation in Java, REST APIs, SQL, CI/CD, and maintainable engineering practices.

| CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Developer - Associate
- MongoDB Certified Java Developer M101J
- Google Cloud Platform Essentials

| EDUCATION

Bachelor of Engineering, Information Technology
Dharmsinh Desai University
